EDUCATION

University of California, Berkeley

B.A. Data Science (Business & Industrial Analytics); SCET Certificate

Expected Spring 2027

Parsons Paris - The New School

Strategic Design & Management; Art, Media, & Technology

Spring 2026 Student

WORK EXPERIENCE

Genentech

South San Francisco, CA

Data Visualization & UX

Aug 2025 - Oct 2025

- Independently designed and built an interactive gene expression dashboard that enabled a Genentech researcher to determine whether a compound exerts consistent effects across three cell lines, directly advancing their project
- Developed the full visualization system: dual heatmaps, interactive volcano plots, overlap analysis, and dynamic filters that turned a complex multi-sheet genomic experiment into a single, coherent, and explorable interface
- Built export functionality across CSVs, PNGs, and structured Excel reports so that findings could move seamlessly from the dashboard directly into the researcher's presentations and downstream analysis workflows

Berkeley Social Welfare

Berkeley, CA

Research Assistant

Sep 2024 - May 2025

- Built an NLP pipeline to process 41,000+ public comments on CMS policy in support of NIH-funded research, transforming large-scale qualitative input into legible and actionable findings for an academic publication
- Leveraged prompt engineering and TF-IDF classification with cosine similarity to systematically surface and categorize diverse stakeholder perspectives at a scale and depth no manual review process could replicate
- Synthesized computational findings into data visualizations and policy memos that made large-scale analysis legible and structured, ultimately contributing to research presented at the SSWR 2026 annual conference

University of California, San Francisco (UCSF)

San Francisco, CA

Data Science & UI/UX Design Intern

July 2024 - Nov 2024

- Worked directly with the CIO to audit the SIS Reports Portal, a legacy internal system used by faculty and administrators across UCSF, identifying usability issues across navigation, filtering, and information organization
- Implemented front-end improvements to the live portal using React, Bootstrap, HTML, CSS, and JavaScript, translating audit findings directly into a more intuitive, navigable, and accessible interface for daily users
- Supported data quality and reporting infrastructure using SQL, IBM DB2, and Tableau, surfacing and resolving inconsistencies that were actively degrading the reliability of critical reports that stakeholders depended on

PROJECTS

Outward - AI Activity Companion

San Francisco, CA

Sole Designer & Developer

Apr 2026

- Designed and developed an AI-powered cultural companion that generates personalized recommendations for places, music, and reading; powered by Gemini API and tailored to each user's taste, mood, lifestyle, and location
- Built an editorial-style interface around behavioral nudge theory and emotionally intelligent personalization, deliberately designed to prioritize intentional real-world action over passive screen time and algorithmic retention

#unplugged - Offline Dining Experience Kit

Parsons Paris

Student Designer & Researcher

Mar 2026 - May 2026

- Conceived and prototyped a dining experience kit: a 50-card prompt system, complete brand identity, and an event programming roadmap and partnership model, to help restaurants cultivate a culture of intentionality
- Grounded the design in mixed-methods research including behavioral mapping, fly-on-the-wall observation, and extreme user surveys to identify exactly where and why phones displace presence during the dining experience

Her&I - Interactive Marketing Campaign

Parsons Paris

Student Creative Director & Developer

May 2026

- Created an interactive marketing campaign for Spike Jonze's Her that reimagines film promotion as an immersive emotional experience, inviting users into the film's themes of loneliness, intimacy, and the uncanny comfort of AI
- Built the experience in Next.js and Tailwind CSS using Claude Code, with a Gemini API backend that brings the campaign's emotional narrative and visual identity to life through natural and realistic conversational interaction

SKILLS

Design: Figma, Adobe InDesign, Illustrator, Photoshop, Interaction Design, Editorial Design, Visual Identity, UI/UX

Development: Next.js, React, Python, Java, SQL, JavaScript, HTML/CSS, Tailwind CSS

AI & Data: Gemini API, Claude API, NLP, Machine Learning, Data Visualization, Prompt Engineering
